Property Details

Phase 1 of this project... 25,000 s.f. building addition. This Project ties three buildings together for a combined total square footage of 109,250 s.f. of warehouse space under roof for KCC International.

The building addition is a custom engineered building system with standing seam metal roof. Given the odd configuration of the buildings there are multiple roof slopes to contend with.

The project is designed and built by Lichtefeld, Inc.
